Opening Script

Every assessor in your community regardless of organization completing the VI-SPDAT should use the same introductory script. In that script you should highlight the following information:

the name of the assessor and their affiliation (organization that employs them, volunteer as part of a Point in Time Count, etc.)

the purpose of the VI-SPDAT being completed

that it usually takes less than 7 minutes to complete

that only "Yes," "No," or one-word answers are being sought

that any question can be skipped or refused

where the information is going to be stored

that if the participant does not understand a question or the assessor does not understand the question that clarification can be provided

the importance of relaying accurate information to the assessor and not feeling that there is a correct or preferred answer that they need to provide, nor information they need to conceal

- military service and nature of discharge
- ageing out of care
- mobility issues
- legal status in country
- income and source of it
- current restrictions on where a person can legally reside
- safety planning

Appendix A: About the VI-SPDAT

In communities getting the results required to end chronic and episodic homelessness, the introduction of a coordinated access and common assessment approach has proven to be essential for success. Many communities have struggled to find evidence informed tools and strategies, which demands an investment of considerable time, resources and expertise. Others are making it up as they go along, using “gut instincts” in lieu of solid evidence. Communities need tools that enhance their ability to quickly implement an effective approach to access and assessment. The VI-SPDAT is a first-of-its-kind tool designed to fill this need, helping communities end homelessness in a quick, strategic fashion.

The VI-SPDAT

The VI-SPDAT was initially created by combining the elements of the Vulnerability Index which was created and implemented by Community Solutions broadly in the 100,000 Homes Campaign, and the SPDAT Prescreen Instrument that was part of the Service Prioritization Decision Assistance Tool. The combination of these two instruments was performed through extensive research and development, and testing. The development process included the direct voice of hundreds of persons with lived experience.

The VI-SPDAT examines factors of current vulnerability and future housing stability. It follows the structure of the SPDAT assessment tool, and is informed by the same research backbone that supports the SPDAT - almost 300 peer reviewed published journal articles, government reports, clinical and quasi-clinical assessment tools, and large data sets. The SPDAT has been independently tested, as well as internally reviewed. The data overwhelmingly shows that when the SPDAT is used properly, housing outcomes are better than when no assessment tool is used.

The VI-SPDAT is a triage tool. It highlights areas of higher acuity, thereby helping to inform the type of support and housing intervention that may be most beneficial to improve long term housing outcomes. It also helps inform the order - or priority - in which people should be served. The VI-SPDAT does not make decisions; it informs decisions. The VI-SPDAT provides data that communities, service providers, and people experiencing homelessness can use to help determine the best course of action next.

Version 2

Version 2 builds upon the success of Version 1 of the VI-SPDAT with some refinements. Starting in August 2014, a survey was launched of existing VI-SPDAT users to get their input on what should be amended, improved, or maintained in the tool. Analysis was completed across all of these responses. Further research was conducted. Questions were tested and refined over several months, again including the direct voice of persons with lived experience and frontline practitioners. Input was also gathered from senior government officials that create policy and programs to help ensure alignment with guidelines and funding requirements.

You will notice some differences in Version 2 compared to Version 1. Namely:

- it is shorter, usually taking less than 7 minutes to complete;**
- subjective elements through observation are now gone, which means the exact same instrument can be used over the phone or in-person;**
- medical, substance use, and mental health questions are all refined;**
- you can now explicitly see which component of the full SPDAT each VI-SPDAT question links to; and,**
- the scoring range is slightly different (Don't worry, we can provide instructions on how these relate to results from Version 1).**

Appendix B: Where the SPDAT products are being used in Canada

Since the VI-SPDAT is provided completely free of charge, and no training is required, any community is able to use the VI-SPDAT without the explicit permission of Community Solutions or OrgCode Consulting, Inc. As a result, the VI-SPDAT is used in more communities than we know of. It is also being used in the United States and Australia. A partial list of regions in Canada where we know SPDAT products are being used includes:
